

## Technical Consultant

### Imagine!

Your plane is delayed. The effect of this delay is like an oil stain. Gates are occupied, you miss your connecting flight, your luggage does not reach your next plane in time, boarder control capacity must be adjusted to the exact arrival times etc.

### About the job

The above situation is an example of the USoft platform solutions you will be part of. One of our key solutions is real-time decision-making. With this software USoft enables organisations to analyse vast amounts of seemingly unrelated data from different sources in real-time. With USoft software organisations become smarter and more efficient in their decision-making and other processes.

It is the challenge for the Technical Consultant to develop applications which automate operational changes and decisions with real-time decision-making based on business rules. That requires among other things that the technical consultant can connect domain applications with our rules based USoft Platform. Our platform is for the purpose of integration data streams and decision-making. You work mainly on-site with the customer. This gives a lot of room and freedom for your own ideas. Deadlines are tight and frequent. This means continuous alignment with and advising of the customer.

### Fit for the job?

As a Technical Consultant you have:

- demonstrable college level of working and thinking, preferably in computer science and at least 2 years' experience in software development and data architecture;
- affinity with set-oriented languages (XSL/XML/SQL);
- good Java or C# knowledge;
- professional knowledge of the Dutch and/or English language and
- preferably worked in or affinity with the aviation- or logistic business.

Next to that we find it important how you perform your work, it is a preference when you are:

- result- and open minded;
- a good listener, bold and analytical;
- a team worker and/or
- able to explain and argue advice.

## About USoft

USoft is a global software provider with 30 years of experience. We enable organisations to become smarter and more efficient in their business processes. We are experts in areas including privacy, customer experience and real-time decision making.

Our truly low-code development platform allows you to simply model your ideas while working software is automatically created by the platform. Our software uses the concept of business rules which contributes to flexibility, ready to test and optimise and to align with the required business value. It is built on the concept that even complex software should be easy to build and maintain. Furthermore, our Service Framework makes it easy to connect to other applications.

USoft is a privately-owned company headquartered in The Netherlands, with additional offices in the UK and Serbia. We serve a broad range of customers in the sectors of financial services, healthcare, aviation, transportation and government. In addition to our portfolio, USoft provides the integration platform for BioTrust, our sister company and global provider of multimodal biometric authentication solutions. Find out more at [www.usoft.com](http://www.usoft.com)

The working atmosphere at USoft is one of mutual respect where the employees encompass our products and customers like a family. We organize almost everything on the basis of self-steering (in teams) and individual responsibility. Hierarchy is only present when completely necessary, the lines of communication to each other and the executive board are short and informal.

## Compensation benefits

We consider it important for our people to grow. USoft trains you to become an expert in USoft software. We give tailor-made training courses and we find the mutual exchange of knowledge between colleagues on the work floor a very effective and inspiring way to learn and grow. Your development is good for your career; and also, our customers benefit from it. Next to that we train our people to take active leadership on themselves and others.

Your salary is based on the weighting of your job, your experience and your training. Our working hours are flexible, and it is possible to work on a part-time basis. We encourage knowledge migrants to respond. We are an established referent for knowledge migrants.
